# Emerson® Electronic Unit Controller

## Key Functions

- Controls Unit Based On Suction Pressure
- Fan Cycling With Mid Coil Temperature\*
- Discharge Line Protection\*

\* Feature Dependent On System Design

## Key Benefits

- Quick & Easy Set-Up
- Improved Set-Point Accuracy
- Enables Multi-Refrigerant Product
- Trouble Shooting Diagnostics
- Added System Safeguards

# Emerson® Electronic Unit Controller Delivers System Value On Many Fronts...

**Step-Change In Technology Significantly Improves Service And Lifecycle Costs**

# Mechanical Vs Electronics

## Ease Of Use – Adjusting Pressure Controls

### Mechanical

- Coarse Adjustments
- Drift Over Time

### Steps For Adjusting Mech. Low Pressure Control

1. Hook Up Gage Set
2. Read System Pressure
3. Adjust The Mechanical Pressure Control With A Wrench Or Screwdriver
4. Allow System Pressures To Settle
5. Read System Pressures
6. Final Adjustment To The Mechanical Pressure Control
7. Remove The Gage Set

**Up To 25 Minutes!**

### Electronics

- Fine Adjustments
- 1.5% Accuracy Over Life

### Steps For Adjusting Electronic Low Pressure Control

1. Hold 3 Seconds To Enter Menu (PSI Light Flashing)
2. Cycle Through Menu Options
3. Select Value
4. Adjust Value
5. Store Value

**Less Than 1 Minute!**

# Feature Details

| Feature             | Standard   | Optional  |
|---------------------|--|---|
| <b>Low Pressure</b> | Std Setting                                      | Customer Specified Setting  |
|                     | Digital Setup                                    |   |
|                     | Improved/Stable Set-point Accuracy               |   |
| <b>Protection</b>   | DLT On Scroll Units                              | DLT Added And Set To Customer Specified Setting                   |
|                     | Bump Start Off                                   | Bump Start On And Set To Customer Specified Setting               |
|                     | Short Cycle Protection Off Time Set To 6 Seconds | Short Cycle Protection Off Time Set To Customer Specified Setting |
|                     | Smart Fan Control On Units With Fan Cycling      | Customer Specified Fan Cycling Set Points                         |
|                     |  | Short Cycle Protection - Min Time Between 2 Compressor Starts     |
|                     |  | Condenser Temp Warning On 2 Fan Units                             |
|                     |  | Alarm Output For Non-dual Fan Cycling Units                       |
| <b>Diagnostics</b>  | Condensing Temp                                  |   |

# ***Emerson® Electronic Unit Controller Customer Implementation***

- **Implementation Will Begin February 2011**
- **Distribution Services Will Start Transitioning Late March**
- **Phase-In Of All Units Complete By December 2011**
- **All Units With The Controller Will Have The Following Label On The Outside Of The Package:**

# Electronic Pressure Control Service Parts

- Kit Including Controller, Sensors, And Instructions Will Be Available At The Distribution Center For Wholesalers To Stock.
- Controllers Provided To Wholesalers Will Have A Basic Program And Be Able To Be Configured To Exactly Match The Previous Controller. Detailed Instructions Will Be Provided – See Example Label Below.

# Quick Start Guide – 2010ECT-143

## Emerson® Electronic Unit Controller for Copeland® condensing units

### Key Functions

- Controls unit based on suction pressure
- Fan cycling with mid coil temperature\*
- Discharge line protection\*

### Key Benefits

- Quick and easy setup
- Improved set point accuracy
- Enables multi-refrigerant product
- Troubleshooting diagnostics
- Added system safeguards

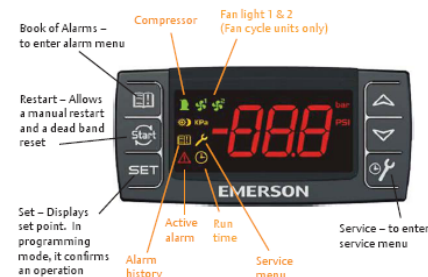

\*Feature dependent on system design

## Quick Setup Guide

### Adjusting Low Pressure Settings

- Hold DOWN and SET simultaneously for 3 seconds to enter menu (PSI light will flash) ▼ + SET
  - Cycle through menu options – UP/DOWN ▲ ▼
  - Select function – SET SET
  - Adjust value – UP/DOWN ▲ ▼
  - Store function - SET SET
  - Exit menu - UP and SET ▲ + SET
- Low Pressure Cut-In      Low Pressure Cut-Out

When light is on, feature or component is on or active

### Accessing Alarm Code Information

- Press and release ALARM 📖
- Cycle through menu options – UP/DOWN ▲ ▼
- Press SET to see number of alarms SET
- Press SET again to return to menu options SET
- Exit menu - UP and SET ▲ + SET

| Alarm | Description                       |
|-------|-----------------------------------|
| PoF   | Keypad locked                     |
| Pon   | Keypad unlocked                   |
| P1    | Suction probe failure             |
| P2    | Condenser probe failure           |
| P3    | DLT probe failure                 |
| HA    | High condenser temperature alarm  |
| dLT   | DLT temperature alarm             |
| dLL   | DLT lock alarm                    |
| HP    | High pressure trip alarm          |
| HPL   | High pressure trip lock-out alarm |
| EE    | Module Failure                    |

### Accessing Service Menu

- Hold SERVICE for 3 seconds 🔧
- Cycle through menu options – UP/DOWN ▲ ▼
- Press SET to see number of alarms SET
- Press SET again to return to menu options SET
- Exit menu - UP and SET ▲ + SET

| Code | Description                    |
|------|--------------------------------|
| StH  | CompressorStarts –1000 -999999 |
| StL  | Compressor Starts –0 -999      |
| CHH  | CompressorHours -1000 -999999  |
| CHL  | Compressor Hours -0 -999       |
| F1H  | Fan 1 Hours -1000 -999999      |
| F1L  | Fan 1 Hours-0 -999             |
| F2H  | Fan 2 Hours -1000 -999999      |
| F2L  | Fan 2 Hours -0 -999            |

Example: If StH=12 and StL=500, the total number of compressor starts=12,500

Note: After 15 seconds of inactivity the controller will revert to the default display.

# FAQ's

---

- **What Changes Does The Customer Need To Make?** *If They Change The Low Pressure Control Set Point, The Process Will Be Simpler But Require Power To Controller, See Previous Slides*
- **Will Model Numbers Change?** *No, This Is A Running Change*
- **Will The Dimensions Of The Condensing Unit Change?** *No*
- **Will We Still Offer Mechanical Pressure Controls If A Customer Requests?** *No*
- **Are There Any UL Updates / Changes Needed?** *Only In IPD's File. Customers Will Not Need To Make Updates.*
- **Will This Affect The Performance Of The Unit?** *No, But Set Points Will Be Held More Accurately*
- **If A Customer Has An Adjustable High Pressure Control Today, Will They Have It When Dixell Is Implemented?** *No*
- **How Accurate Is The Product?** *Improved, more stable and tighter set-point Tolerance*
- **What is the Default Setting – Can I have This Factory Set At IPD?** *The default setting is the same as what you have today. We can set it at IPD as an optional and extra feature.*

# FAQ's Continued

---

- **What Happens If The Midcoil Temp Sensor Fails?** *Fans Will Run*
- **Are The Sensors For Multi-ref Units Different From The Standard Sensor?** *No*
- **Will Bumpstart Be On Every Unit?** *It Will Be Set To "Off" For Every Unit Except T-line Units.*
- **What Are The Bumpstart Settings?** *2 Seconds On, 5 Seconds Off – 3 Times*
- **What Is The LP Rating Of The Controller?** *IP 65 For The Front, IP 20 For The Back.*
- **What Happens If The Plug Comes Off The Transducer?** *The Unit Goes Into Limp Along Mode.*
- **What Is "Limp Along" Mode?** *The Unit Will Turn On For 5 Minutes And Then Off For 5 Minutes.*
- **Can The Time Delay Function Be Used For Low Ambient When The Low Pressure Control Needs To Be Pulled Out Of The Circuit?** *No, But We Are Planning For This In The Next Generation.*
- **Will This Be Available For Retrofit?** *Not at this time because the temperature sensing required for accurate fan cycling requires a thermo well brazed on the condenser.*
